POST /boats :

The Postman request takes in three attributes, the name, the type, and lastly the length. The response of this Postman body contains the created boat's id, its name, its type, its length, and lastly its url. This Postman request will return a status code 201 if it was able to post the boat correctly.

GET /boats/:boat_id :

The Postman request finds the requested boat using its id, if the boat exists, the response of this Postman body contains the created boat's id, its name, its type, its length, and lastly its url. This Postman request will return a status code 200 if it was able to locate the boat with that id.
